

Alyssa Huang

SENIOR UX & PRODUCT DESIGNER

An engineer-turned-product-designer with around eight years across enterprise systems and on-device AI products, skilled at turning high-density, technically constrained products into tools people can trust. I single-handedly owned an industrial inspection-system redesign and shipped it personally as an engineer; today I lead product design for on-device AI and enterprise IT products at ASUS.

EXPERIENCE

2024.06 – Present
~2 yrs · Taipei

Product Designer ASUS

- Own the 0→1 UX of the on-device AI app **File Search** (1 of 5 peer apps in ASUS MyExpert): unified local + cloud search behind one query, with a self-regulating semantic index that keeps search useful as files outgrow a fixed device-memory budget.
- After the gyroscope feature launched, handled a **customer-complaint crisis in the China region** — resolving 7 complaints and recovering 4 returns within one month — coordinating across Customer Service, RD and Marketing.
- Lead end-to-end UX of the enterprise IT console **ACM (ASUS Config Manager), v1.0 → v2.0** — compressing 11 raw firmware exit codes into deploy states an admin can act on, so per-device failure diagnosis becomes a fleet result that reads at a glance. Shipped commercially.
- Proposed an **AI-assisted UX workflow** that confirmed a project sitemap in two weeks and was adopted by the 10-person design team; established shared UX guidelines across three product lines.

2023 – 2024 · Career break (family circumstances and health recovery)

2017.04 – 2023.04
6 yrs · Taipei

Senior Software Engineer Test Research Inc. (TRI)

Official title: AXI System Software R&D Engineer (Senior Engineer grade) · Sole UI/UX owner of the TR7600 AXI system

- Owned the complete UI/UX redesign of the industrial-inspection system **TR7600 AXI** and shipped it personally, cutting per-board programming time by **37% (295 → 186 min)**, deployed across Tier-1 global EMS manufacturers.
- Redesigned the two most time-consuming workflows: **Library –39% (124 → 76 min)** and **Fine Tune –51% (158 → 77 min)**.
- Built a unified design system and **Design Guideline shared across 10 machine models** (maintained for six years), supporting five locales for whole-family UX consistency.
- Introduced product design from scratch in an engineering-led firm; designed a **“Customer → FAE → RD” requirement process adopted by 50+ FAE/RD staff**; served as the internal UX instructor.

EDUCATION

2014 – 2016

M.S. · Interaction Design National Taipei University of Technology

Foundation of design capability. Thesis: an AR rehabilitation game (C# / Unity3D).

2010 – 2014

B.S. · Information Management (IT) Shih Hsin University

Foundation of programming capability; coursework in software development, databases, and systems analysis.

SKILLS

Product Design

UX Strategy

Information Architecture

Design Systems

End-to-end Ownership (0→1)

Systems & Platform UX

On-device AI Product UX

Enterprise B2B SaaS

Security UX
